# **3M<sup>™</sup> Electrical Tapes Glass Cloth**

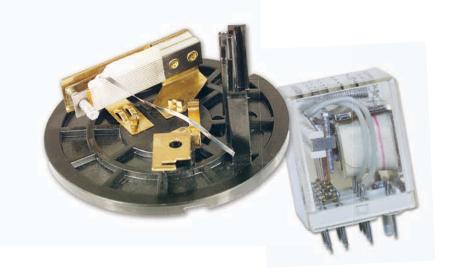

3M offers exceptionally flexible and conformable glass cloth backings on the market with high-temperature resistance and tensile strength. With excellent absorption of resins and varnishes plus cut-through and edge-tear resistance, they are unsurpassed for holding and strapping applications up to 200°C.

Available with three (3) adhesive systems: aggressive thermosetting rubber resin, solvent-resistant acrylic and high-temperature silicone.

#### **Filament Reinforced**

Filament tapes are designed for applications needing both the dielectric strength of polyester film and the high mechanical strength of glass fibers. They offer the ultimate in low stretch, high tensile and edge-tear resistance for a more cost-effective solution to glass cloth tapes. Excellent for anchoring

lead wires to banding coils and end-turn taping. A special paper-backed filament tape is available for high-voltage oil-filled distribution transformer use. **Available with two (2) adhesive systems:** aggressive thermosetting rubber resin and solvent-resistant acrylic.

# 3M<sup>™</sup> Electrical Tapes Acetate Cloth

These aesthetically pleasing acetate cloth tapes offer excellent conformability in coil-wrapping applications up to 105°C plus excellent absorption of electrical insulating resins and

varnishes. Available with one (1) adhesive system: aggressive rubber resin.

#### **Composite Film**

3M Composite Film Tapes are excellent for general purpose insulation, anchoring, and banding in motors and transformers. They combine the high dielectric strength and edge-tear resistance of polyester film and nonwoven polyester mat for a conformable product with great puncture resistant and electrical properties. Available in a variety of thicknesses and with two (2) adhesive systems: aggressive rubber resin and solvent-resistant acrylic.

#### **Epoxy Film**

3M has led in the development of epoxy film tapes. These offer solder and puncture resistance, high dielectric strength, conformability and UL recognition for flame retardancy at temperatures up to 155° C. 3M Epoxy Film tapes are designed to require fewer wraps to meet dielectric requirements, compared to typical glass cloth tapes. Their versatility can help reduce your tape inventory. Available with two (2) adhesive system: aggressive thermosetting rubber resin and solvent- resistant acrylic.

# **3M<sup>™</sup> Electrical Tapes Polyester Film**

3M offers a variety of polyester tapes for insulating applications requiring a thin, durable tape with high dielectric strength. They can withstand higher-temperature conditions than tapes with acetate cloth backings. They are also conformable, exhibit excellent chemical, solvent and moisture resistance and resist cut-through and abrasion.

Available in flame retardant and non-flame retardant versions and with two (2) adhesive systems: aggressive rubber resin and solvent-resistant acrylic.

#### **Polyimide Film**

3M polyimide film tapes are specially designed for hightemperature applications requiring a thin puncture-resistant backing. The physical and electrical properties of polyimide remain stable when used in such applications as coils, harnesses and capacitors, that are subjected to extreme temperatures. Available with two (2) adhesive systems: solvent-resistant acrylic and high-temperature silicone.

# 3M<sup>™</sup> Electrical Tapes PTFE Film

Thin high-temperature PTFE tapes are used in applications requiring consistent performance and minimum shrinkage across a wide range of temperatures. They are extremely resistant to chemicals, have high arc resistance, are free of carbonizing materials and are great for non-stick applications. Great for use on high-temperature coils, capacitors, and wire harnesses. Available with two (2) adhesive systems: solvent-resistant acrylic and high-temperature silicone.

#### Vinyl

Scotch® Vinyl Electrical Tapes combine the flexibility of a PVC backing with excellent electrical insulating properties, high dielectric strength, and resistance to moisture, UV rays, abrasion, corrosion, alkalies and acids. (Their rubber-based adhesive performs well over a range of temperatures).

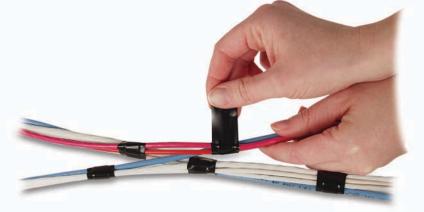

Fade-resistant vinyl comes in a range of colors for marking. For primary electrical insulation up to 600 volts, including wire harnessing, degaussing coils and high-voltage cables.

# 3M<sup>™</sup> EMI Shielding Tapes

3M<sup>™</sup> EMI Shielding Tapes are designed for applications requiring reliable point-to-point electrical contact, particularly EMI/RFI shielding, grounding and static charge draining. The tapes are easily die-cut and have a multitude of uses in electrical design and test laboratories for prototyping, design and troubleshooting.

Available in copper, aluminum, embossed, and tin-plated materials and with two (2) adhesive systems: solventresistant acrylic and conductive acrylic.

# 3M<sup>™</sup> Flexible Insulation Products

#### 3M<sup>™</sup> Flexible Insulation is recommended for:

- Ground, phase and interwinding insulation for dry-type transformers
- Slot, phase and wedge insulation for electric motors and generators
- Flame barrier insulation for appliances
- · Collars for voice coils used in loudspeakers
- · Lens wrap cushioning for eye glass lens production
- Wire and cable wrap
- Specialty paper base for tamper-proof labels

#### **3M ThermaVolt Calendared Inorganic Insulating Paper**

3M ThermaVolt Calendared Insulating Paper is an inorganic-based paper developed to meet the high performance required for use in high-temperature, dry-type transformers. It offers good dielectric characteristics and thermal conductivity – making it especially suitable for use as interwinding insulation in strip-wound coils. It also has been designed for use as major ground insulation in electrical insulation systems up to Class N (200° C).

#### 3M CeQUIN I and II Inorganic Insulating Paper, Laminates and Boards

3M CeQUIN Inorganic Insulating Paper is 3M's highest inorganic-content paper; comprised primarily of glass fibers and microfibers, inorganic fillers, and less than 10% organic materials. It is capable of performance at temperature peaks up to 250°C and is a highly flexible paper. This paper has found a wide variety of uses over the years including use as interwinding insulation for foil wound dry-type transformers.

#### **3M TufQUIN 110 Hybrid Insulating Paper**

3M TufQUIN 110 Hybrid Insulating Paper is a flexible, conformable paper which has physical toughness in the form of high tensile strength and excellent tear resistance. TufQUIN 110 paper offers good dielectric characteristics and thermal conductivity in conjunction with high-temperature performance.

#### **3M Thermal Shield PPS Non-Woven Insulating Paper**

3M Thermal Shield PPS Non-Woven Insulating Paper is designed for use in applications requiring long-term exposure to high temperatures or resistance to chemicals including oils, solvents, and most acids and bases. Thermal Shield paper can be used in a variety of applications without drying. Thermal Shield paper may be laminated to polyester film or resin coated to enhance its performance.

3M Flexible Insulation Products also are available in laminate form, as two-ply and three-ply using polyester film. Ask your 3M sales representative or authorized distributor for details.

# The second

#### **Voltage Endurance**

3M Inorganic Insulating Materials retain a high percentage of dielectric strength even after extended exposure to high operating temperatures. They also will exhibit greater voltage endurance under continuous electrical stress than many other electrical insulation materials, helping improve equipment reliability.

#### **Thermal Conductivity**

The high thermal conductivity of inorganic papers helps achieve the heat dissipation required in today's high-efficiency electrical apparatus, allowing the design of smaller, more cost-effective equipment.

#### Varnish Absorption

The good varnish absorption characteristics of inorganic paper can enhance its already high thermal conductivity, allowing equipment to run cooler, quieter, and last longer.

#### Low Moisture Absorption

Manufactured with less than 1% moisture content, inorganic papers exhibit low moisture absorption even in humid environments. This gives them dimensional stability and reduces the need for extended drying cycles.

#### Slitting

Precisions slitting  $\pm$  0.005" (0.127 mm) may be available for some tapes upon request. The minimum width for this service is 0.125" and the maximum width is 2.000". Standard slitting tolerances are dependent on the type of backing. All tapes have a width tolerance of  $\pm$  1/64", with the exception of some polyesters, vinyl, acetate and glass cloth which have a tolerance of  $\pm$  1/32".

#### **Printing Options**

There are five available methods for imprinting tapes: Ink Jet Hand Stamping/Hot Stamping/ Letterpress/Flexographic/Offset. All 3M<sup>™</sup> Electrical Tapes are printable by hot stamping. Some tapes in the 3M line are more suited for the other methods. Printer converters who print with flexography should contact their 3M sales representative to determine the tapes that are suitable for this printing method.

\* Other tape lengths may be available; contact your 3M sales representative or Customer Service for information.

† This tape chart is a comparative guide for tape selection purposes. All property values shown are typical and are not intended for specification purposes. They are based on tests performed in accordance with ASTM D 1000, except Electrolytic Corrosion Factor, which is a 3M test method available on request. Proposed specifications detailing maximum and minimum values are also available on request.

# About 3M<sup>™</sup> Insulating and Conductive Tapes

#### **Tape Adhesives**

**Thermosetting Rubber (RT):** Thermosetting rubber adhesives have high initial adhesion and electrical purity. When properly thermoset, a rubberresin adhesive system is designed to provide more aggressive adhesion and bonding, higher solvent resistance and higher heat resistance.

**Acrylic (A):** Acrylic adhesives have high solvent resistance and do not require pre-baking or thermosetting because they are made from synthetic polymers specifically formulated to resist heat, oxidation, solvents and oils, and exhibit acceptable performance in many applications without a cure cycle.

**Silicone (ST):** Silicone adhesive systems are perfect for high temperature applications because they have exceptional heat resistance, are inorganic, require higher temperatures for the thermosetting reaction, and, if burned, leave a nonconductive residue.

Important Note: Before using any 3M products, you should review the product label and/or Material Safety Data Sheet.

**Customer Plant Survey:** 3M will provide a technically trained sales professional who can survey your plant, manufacturing procedures, equipment and tapes, and suggest ways to improve your product cost effectiveness and make your plant more efficient – all at no cost to you. Ask your 3M representative for more details.

#### **ISO 9002 Registration**

The 3M facilities which manufacture the insulating and conductive tapes in this publication have been registered by Underwriters Laboratories, Inc. to the International Standards Organization (ISO) 9002 quality management system standard. For the customer, registration provides proof of the quality of suppliers' systems. For companies with numerous manufacturing sites, such as 3M, ISO registration provides a consistent and efficient method of standardization. Prior to actual use, the product label and/or Material Safety Data Sheet should be reviewed.

#### **Log Only Products**

The following  $3M^{\text{TM}}$  Tapes are not available in slit rolls: 12, 16, 44D-A, 44T-A, 55, 92-2, 1093, 1157R, 1206, 1318, 1350F, 1350T and 1351. These products must be purchased through an authorized slitter/distributor.

#### **Industry Standard Test Methods**

This publication is a comparative guide for tape selection purposes. All property values shown are typical and are not intended for specification purposes. With the exception of Electrolytic Corrosion Factor, which is a 3M Test Method available on request, the properties are based on tests performed in accordance with recognized industry standard procedures:

- IEC 60454 Specification for pressure-sensitive adhesive tapes for electrical purposes Part 2: Methods of Test
- ASTM-D-1000 Test methods for pressure-sensitive adhesive-coated tapes used for electrical and electronic applications

Proposed specifications detailing maximum and minimum values are also available.
