

LOW VOLTAGE AC DRIVES

ABB drives for water and wastewater ACQ580, 0.75 to 500 kW

ACQ580 series Always flowing. Never still.

Water utilities require reliable solutions securing the flow of water and wastewater.

The ACQ580 drive for water is part of ABB's all-compatible drives portfolio. This robust drive is designed to secure optimal operation of water and wastewater pumps, while ensuring low energy consumption.

The energy efficient drive for water and wastewater pumping

Whether your pump system requires redundancy in multi-pump applications or built-in pump applicaton functionalities designed for the water and wastewater industry, the ACQ580 is designed to meet your requirements.

4

Simplicity at your fingertips

The control panel's straightforward primary settings menu with assistants helps you set up the drive quickly and effectively. See more on pages 21-22.

Speaks water-specific terminology

The drive has built-in pump application control programs to secure optimal operation of the water and wastewater pumps. See more on page 11.

Boosting energy efficiency

The energy optimizer helps you to save energy, and the energy efficiency information made available to you help monitor and save the energy used in your processes. The drive meets IE2 energy efficiency requirements. See more on page 11.

Reliable, integrated safety

Safe torque off (STO) built-in as standard and the ATEX certified thermistor protection module CPTC-02 provides enhanced process safety and easy, simplified installation. See more on pages 27-28.

Remote monitoring solutions

Remote monitoring via standard web browsers will help lower costs by reducing the amount of routine site visits. See more on page 25.

The ACQ580 water and wastewater drives are part of ABB's all-compatible drives portfolio. The drives secure the flow of water and wastewater in the pumping system throughout their whole life cycle. The ACQ580 drive is easy to commission and use. With built-in pump functionalities, the drive keeps the pumping system operating optimally, lowering the energy bill. The drive is used in water and wastewater treament plants, pumping stations, desalination plants, industrial wastewater facilities and irrigation environments. The drive is used with inflow pumps, transfer pumps, dosing pumps, sludge pumps, booster pumps, submersible pumps and compressors, blowers, decanter centrifuges, mixers and fans.

Controls virtually any kind of motor

The drive has the ability to control almost any motors from induction and permanent magnet motors to synchronous reluctance motors. See more on pages 34-37.

Startup and maintenance tool Drive composer PC tool for startup,

configuration, monitoring and process tuning. The PC tool is connected to the drive's control panel with a standard USB cable. See more on page 25.

Robust with built-in features

A robust performer with enclosure class up to IP55, that is simple to select, and easy to install and use. Built-in features such as an EMC filter, choke, a Modbus RTU fieldbus interface and safe torque off (STO) functionality simplify drive selection, installation and use. See more on pages 24, 31.

Reliable communication

With its wide range of optional fieldbus adapters and embedded RTU Modbus, the drive enables connectivity with all major automation networks and control systems. See more on page 26.

Input/output extensions

In addition to the standard interfaces, the drive has a built-in slot for additional input/output extension modules. See more on page 26.

All-compatible solutions for water and wastewater applications

Environment all-compatible

Achieve your environmental goals with our energy-efficient drive for water and wastewater. The all-compatible drives offer built-in energy efficiency calculators. They help you to analyze and optimize your pump processes to reduce stress on the environment. Other environmentally friendly features include the built-in soft pipe fill function to ensure less water hammering on the water pipes, thus preventing the risk of unwanted leaks, unplanned outage and repair costs.

Process all-compatible

Water and wastewater processes consist of many phases which require optimal performance of your pump solution from start to finish. Our robust drives are available with enclosures up to IP55. The drive controls virtually any kind of motors from induction and permanent magnet motors to synchronous reluctance motors up to 500 kW. The drive is compatible with a wide range of fieldbus protocols, ensuring reliable communication between the drive and automation system in use.

Business all-compatible

As a reliable global partner, we provide water process solutions that help to keep the life cycle costs of your pump solution stable. Additionally, we help keep your water process productive and consistent in an energy efficient way. Our wide range of water industry products and solutions offer optimal flow of water all hours of the day. This means lower energy consumption, improved productivity, flexibility and ease of use. With offices in over 90 countries and a global technical partner network, we offer technical advice and local support worldwide.

Human all-compatible

You can feel confident using our all-compatible drives for water and wastewater. The drive speaks the language of your pump application, making it easy to set up, configure and use. The intuitive Hand-Off-Auto control panel ensures that you have access to the essential information quickly. For accessing your drive from a distance and receiving valuable analytics, we offer remote monitoring solutions.

Optimizing the flow of water and wastewater in your pumping solutions

The ACQ580 water and wastewater drive is built to help users, designers, OEMs, system integrators and EPC professionals secure pumping of water and wastewater in municipal utilities, pumping stations, industrial wastewater facilities, desalination plants and irrigation environments. It offers long-term, technically-compatible drive solutions supported by full service and support.

Multi-pump control

Ensure stable and uninterrupted production with multi-pump controls by optimizing the speed and number of running pumps.

Built-in pump application software

The built-in pump application software in the ACQ580 drives is designed to enhance the reliability and durability of the water and wastewater application in which it is used. The functions protect the pump and secure its optimal functionality, increasing cost efficiency. The built-in functionalities also support the user in securing the flow of the water and wastewater in the pump solution.

Multi-pump functionality

The function maintains stable process conditions for several parallell pumps (up to 8 pumps at the same time)

operating together. It is possible to optimize the speed and number of pumps needed when the required flow or pressure rate is variable. This built-in functionality ensures continuous operation for multipump systems even if one or more pumps fails or requires maintenance.

Sensorless flow calculation

Measures the amount of water flowing without the need for external sensors. This will enable you to reduce costs as there is no need for setting up and using additional sensors or back up the flow meters to avoid interruptions in the process.

Level control

Control the filling or emptying of wastewater storage and water tower tanks. Level control can be used within a station controlling up to eight

pumps. The level control function has varying pre-set water levels and the pumps will start and stop based on measured level. This method allows the pumps to run at an efficicent speed and ensures the pump sump does not become over contaminated by sediment.

Soft pipe fill

The soft pipe fill function manages the pressure of water by filling the pipeline with a gentle approach. This helps to avoid sudden

pressure peaks and reduces the risk of water hammer which can cause damage to the water pipes.

Quick-ramp

Protect bearings when a submersible pump is started without water. Quick ramp allows your pump to reach optimal speed to extend pump

life, ensure operation and prevent unplanned outages.

Pump cleaning

Keeps the impeller of the pump clean by running a sequence of aggressive ramps between minimum and maximum pump speed.

Turbidity reduction

When a pump starts as slow as possible, it creates the lowest turbidity values for the water being moved or extracted. When you

combine quick ramps and long normal ramps, the drive will protect and run submersible pump most optimal way.

1, **Pump protection**

The built-in protection functionalities ensures that pumps can operate at the best possible conditions. The maximum pressure protections

help to protect the pump and the system in case of a blockage in the pipeline. In case of a pipe rupture, the minimum pressure protection can generate an alarm or fault or can be programmed to run at certain speed to avoid dirty water entering the pipeline. The inlet pressure protection can help to avoid cavitation. When the inlet pressure of a water pump falls below pump design specifications, tiny vapor bubbles form. These bubbles collapse when they meet the impeller, causing shock waves and points of high temperature that can corrode the surface of the impeller.

Dry run protection

This function prevents the pump from running dry. The water pump shaft and impeller are rotating at fast rates. If there is no dry pump

protection, the released heat can damage the pump over time, limiting its lifetime.

General software features of the drive

With a pump control software one drive controls several pumps or blowers in parallel and eliminates the need for an external programmable logic controller. This results in reduced stress on the mains and the system as well as in lower maintenance and operation costs.

Startup assistant allows first-time users to quickly customize the drive, out of the box, according to their needs. This is complemented by a built-in help function to make parameter-by-parameter setting easy.

Enjoy sophisticated process control in scalar and vector control modes. They support a wide range of motors including induction, permanent magnet and synchronous reluctance motors.

The energy optimizer feature operates both in scalar and vector control modes, ensuring maximum torque per ampere and reducing energy drawn from the supply. You can follow the saved energy, CO₂ emissions or money, and see how fast the drive brings you a return on investment.

The drive reduces motor noise by spreading the switching frequencies over a user-specified range. The higher used switching frequency reduces motor noise at low load without limiting full current at maximum load.

Diagnostic assistant helps in locating the cause of any disturbance to the drive, and even suggests possible remedies. This reduces process downtime by making repairs or adjustments effortless.

A built-in and stand-alone process PID/loop controller makes the drive a self-governing unit that requires no external logic input from the control room but requires only an external process measurement.

Load profile feature collects drive values, such as current and stores them in a log. This enables you to analyze and optimize the application with the help of historical data load.

> Adaptive programming provides extra flexibility by offering easy alternative for simple programming needs.

How to select a drive?

It is very easy to select the right drive. This is how you build up your own ordering code using the type designation key.

Securing the flow of water and wastewater with the ACQ580

The ACQ580 is a robust and compact drive ensuring low energy consumption and continuous, reliable motor control with a power and voltage range from 0.75 to 500 kW and 380 to 480 V. It has coated boards and offers enclosure classes up to IP55 for different environments. The drive is designed for water and wastewater pumps, blowers, mixers, centrifuges and fans.

01 The ACQ580 drive series

02 Flange mounting for panel installation ensures less thermal load inside the panel by keeping most of the losses outside the panel **Built-in pump functionality for optimal flow of water** Built-on ABB's common drives architecture, the drive offers pump operation, energy savings and usability benefits supported by a local network of service and support. The water and wastewater drive has several different built-in pump application features for optimal pump operation (see page 10).

Intuitive usability supported by simple connectivity To ensure fast set-up and operation of the drive, adjusting drive settings has been made easy with the robust and intuitive Hand-Off-Auto control panel. The control panel has a powerful diagnostics menu that makes it possible to guickly access information, even in facilities with poor visibility. Drive usability is further enhanced via wireless Bluetooth connectivity between the drive and mobile devices, making it easy to access the drive in difficult-to-reach locations. Connectivity to automaton systems is ensured with the drive connecting to various fieldbus protocols. To ensure compliance with electric grids, the ACQ580 has a built-in 1st environment EMC filter and choke. The drive also supports functional safety design, as it offers integrated safety features with safe torque off (STO) built-in as standard.

The wall-mounted drive (ACQ580-01) offers flange mounting as an option, separating the control electronics from the main circuit cooling airflow, saving space and ensuring optimal cooling and extends the lifetime of the drive. The cabinet-built drive (ACQ580-07) offers flange mounting as a standard solution. This results in better thermal management in panel installation. The advanced pedestal system and ramp of the drive module (ACQ580-04) ensure easy installation and reduce time needed for setup and commissioning.

Complete offering from wall-mounted drives to cabinet installations

No matter the frame size or power range, all ACQ580 drives bring you ease of use, scalability and quality.

01 Wall-mounted ACQ580 IP21 drive

02 Wall-mounted ACQ580 IP55 drive

— 03 ACQ580 Drive module IP00 drive

— 04 Cabinet-built ACQ580 IP42 drive

The wall-mounted IP21 drives

The wall-mounted IP21 drives are available with the power and voltage range from 0.75 to 250 kW and 3-ph 380 to 480 V. Side-by-side mounting, flange mounting and horizontal mounting are all available for the wall-mounted ACQ580 drives.

The wall-mounted IP55 drives

The IP55 drive is designed for applications exposed to dust, moisture, vibrations and other harsh environments. It is similar in size to the compact IP21 drives, which provides significant savings in space, maintenance, engineering, material costs, as well as in setup and commissioning time.

Drive modules for cabinet installations

The ACQ580 drive modules are optimal for system integrators, cabinet builders or OEMs who want to optimize the cabined design in the 250 to 500 kW range, but do not want to compromise the easy installation, commissioning and maintenance.

Cabinet-built drives

The cabinet-built drives are type tested ABB solutions offering robust but easy to use cabinets with a new and innovative cooling arrangement. The ABB made cabinets have many in-built features as standard, delivered with short lead times and always made according to ABB's high quality standards. The design is available as standard for all available protection classes IP21 / 42 / 54 in frames R6 to R11. The power and voltage range is from 75 kW to 500 kW, 3-ph 380 to 480 V.

To select IP classes for the drive see page 24.

Comprehensive connectivity

The ACQ580 drives offer a wide range of standard interfaces. In addition, the drive has two option slots that can be used for extensions including fieldbus adapter modules and input/output extension modules.

Default control connections to the CCU-23 control unit

CCU 23 used in frame sizes R1 to R5 CCU 24 used in frame sizes R6 to R11

Hand-Off-Auto control panel

The control panel features intuitive use and easy navigation. High resolution display enables visual guidance.

Almost anyone can set up and commission the drive for water and wastewater using available control panels. You do not need to know any drive parameters as the control panel helps you to set up the essential settings quickly and get the drive into action.

Control of multiple drives

One control panel can be connected to several drives simultaneously using the panel network feature. The user can also select the drive to operate in the panel network.

With the customizable Home views you can monitor the values that matter most, e.g. pump speed, water flow or pressure, torque or motor temperature. Select the signals from a ready-made list or choose user defined parameters.

Options is used to set a reference, change the motor direction, select the drive, edit Home view pages, and see the fault and warning status.

All functions of the control panel are accessed through 3 the main menu. It is easy to configure the settings of the drive with the Primary settings menu. Through Primary settings you can set all essential settings with few clicks only.

Effortless drive commissioning and use with control panels

A variety of different variants available of control panels and for the ACQ580 drives. Drive setup, maintenance, diagnostics and process monitoring is done via the control panel in an effortless manner.

01 Hand-Off-Auto control panel and Help function are included as standard. USB connection as standard.

02 The optional Hand-Off-Auto control panel with Bluetooth panel. USB connection as standard.

03 By using the panel bus adapter, CDPI-01 the assistant control panel is able to manage up to 32 drives.

01

04

04 The DPMP-01 control mounting platform is for flush mountings. It does not include the control panel. When using this with ACQ580, also CDPI-01 is required.

05 The DPMP-02 mounting platform is for surface mounting. It does not include the control panel. When using this with ACQ580, also CDPI-01 is required.

06 The door mounting kit DPMP-EXT is a ready-made kit consisting of the DPMP-02 and CDPI-01.

Drivetune for commissioning and managing drives

Drivebase for ensured reliability and reduced downtime on production sites

High protection for operation in harsh environments

The ACQ580 can be installed in normal equipment rooms, or even dusty and wet environments, thanks to the drive's wall-mountable construction in both IP21 and IP55 configurations. The module variant is as standard IP00 but available as IP20 with additional finger shrouds. The cabinet-built variant comes with IP21 as standard and is also available with IP42 and IP54 protection class for use in harsh environments.

Option code	Description
+B051	IP20 finger shrouds for modules
+B054 +B055	IP42, IP54 for cabinet-built drives
+B056	IP55 for wall-mountable drives

The robust and protective design ensures that no additional enclosures or components, such as filters and fans, are needed. Overall, the harsh protection drives provide smaller capital expenses by avoiding or advancing maintenance of external components, which in turn improves the reliability of the drive and the process. To ensure reliable operation, the printed cuircuit boards are also offered with coating to comply with class 3C3 in IP55 drives.

Option code	Description
+C218 +B056	3C3 rated PCBs

Flange mounting

The ACQ580 wall-mounted drive offers flange mounting as an option, separating the control electronics from the main circuit cooling airflow, saving space and ensuring optimal cooling. This results in better thermal management in panel installation.

Option code	Description
+C135	Flange mounting

Advanced cooling

The simple and robust design of the ACQ580-07 ensures reliable operation even in the harsh environments. The flange mounting feature comes as standard for cabinet-built ACQ580 drive, which makes the whole cooling arrangement of the cabinet advanced.

Quick configuration for unpowered drives

01 Cold configuration adapter CCA-01

02 Remote monitoring tool NETA-21

03 The Drive composer PC tool Cold configuration adapter CCA-01 provides a serial communication interface for unpowered ACQ580 drives, among other selected drives. With the adapter and Drive Composer PC tool you can set the parameters and pre-configure the drive before sending it to site. The panel makes it also possible to isolate both the serial communication and power supply of the control unit. The power supply is taken from a PC USB port.

PC tool for drive monitoring and process tuning capabilities

The Drive composer PC tool offers fast and harmonized setup, commissioning and monitoring for the whole allcompatible drives portfolio. The free version of the tool provides startup and maintenance capabilities and gathers all drive information such as parameter loggers, faults, backups and event lists into a support diagnostics file with a single mouse click. This provides faster fault tracking, shortens downtime and reduces operational and maintenance costs. The entry version also includes AP programming.

The Drive composer tool is connected to the drive using the mini USB connection on the assistant control panel or to the CCA-01 adapter.

Drive composer pro offers extended functionality

Drive composer pro provides additional features such as custom parameter windows, graphical control diagrams of the drive's configuration and

Cold configurator adapter

Ordering code	Description	Type designation

improved monitoring and diagnostics. The control diagrams save users from browsing long lists of parameters and help set the drive's logic quickly and easily. The tool has fast monitoring capabilities of multiple signals from several drives in the panel bus. Full backup and restore functions are also included.

Remote monitoring access worldwide The remote monitoring tool,

NETA-21, gives easy access to the drive via the Internet or local Ethernet network. NETA-21 comes with a built-in web server. Compatible with standard web browsers, it ensures easy access to a webbased user interface. Through the web interface, the user can configure drive parameters, monitor drive log data, load levels, run time, energy consumption, I/O data and bearing temperatures of the motor connected to the drive.

Flexible connectivity to automation

01 ACQ580 is compatible with many fieldbus protocols and input/output extension modules

03 Fieldbus module FDNA-01 The drives for water and wastewater are compatible with a wide range of fieldbus protocols. The drive comes with a Modbus RTU fieldbus interface as standard. Optional fieldbus adapters can easily be mounted inside the drive.

Drive monitoring

The drive monitors and controls its parameters and signals including speed, torque, power, speed reference and pressure preference. Start/stop is monitored and controlled via the drives communication protocols. A set of drive parameters and/or actual signals, such as torque, speed, current, etc., can be selected for cyclic data transfer, providing fast data access.

Drive diagnostics

Accurate and reliable diagnostic information can be obtained through the alarm, limit and fault words, allowing easy interfacing with plantwide HMIs.

Cabling

Substituting the large amount of conventional drive control cabling and wiring with a single cable reduces costs and increases system reliability and flexibility.

Design

The use of a fieldbus control reduces engineering time at installation due to the modular structure of the hardware and software and the simplicity of the connections to the drives.

Commissioning and assembly

The modular product configuration allows pre-commissioning of single machine sections and provides easy and fast assembly of the complete installation.

Input/output extension modules

Standard input and output can be extended by using optional analog and digital input/output extension modules. The modules are easily installed in the extension slots located on the drive. The

I/O options

		Туре
Option code	Description	designation
	External 24 V AC and DC	
+L501	2 x RO and 1 x DO	CMOD-01
	External 24 V and isolated	
+L523	PTC interface	CMOD-02
	115/230 V digital input	
+L512	6 x DI and 2 x RO	CHDI-01

CMOD options also enable connection to an external +24 V supply, which allows the control panel, control board, fieldbus and I/O to stay on when mains supply is cut off. With the external supply, drive diagnosis and fault finding can still be carried out.

Thermistor protection modules for increased safety

01 ACQ580 supports the ATEX certified thermistor protection module Standard input and output can be extended by using optional digital input/output extension modules. The modules are easily installed in the extension slot located on the drive. The CMOD options also enable connection to an external +24 V supply, which allows the control panel, control board, fieldbus and I/O to stay on when main supply is cut off. With the external supply, drive diagnosis and fault tracing can still be carried out.

The ATEX certified thermistor protection module CPTC-02 provides enhanced process safety and easy, simplified installation.

ABB's ATEX thermistor protection modules CPTC-02 With the option +L537 +Q971:

- Motor temperature rises above the PTC sensor limit temperature
- 2 The sensor resistance increases very sharply and indicates overheating to the atex certified module
- 3 The module switches the STO (safe torque off) circuit off, which activates the STO function
- 4 The STO function disables the control voltage in the power semiconductors of the drive output stage
- 5 The drive is prevented from generating torque to rotate the motor

The safe state is guaranteed

Thermistor protection module

Option code	Description	Type designation
+L537 +Q971	ATEX certified PTC interface and external 24V	CPTC-02

Main disconnect switch for increased safety

01 Main disconnect switch Possibility to disconnect the drive from the main supply

Main disconnect switch

The main disconnect switch option provides a possibility to disconnect the drive from the main supply when needed. This prewired main disconnect switch option saves time, money and space as it is integrated in the drive. There is no need to install an additional, external isolation devices to the supply side of the drive. The option improves safety as it is always visible, when operating on the drive.

Auxiliary contact allows signalling the switch position to PLC to avoid unnecessary controller alarms. The switch can be padlocked to open position to disable drive operation during e.g. maintenance.

Main disconnect switch

Option code	Description
+B056 +F278	IP 55 drive and main disconnect switch with auxiliary contact (NO)

EMC – electromagnetic compatibility

The ACQ580 drive has been designed to meet the EMC requirements set in the product standard IEC/EN61800-3. The wall-mounted ACQ580-01 and the small power cabinet-built ACQ580-07 drives meet category C2 high frequency emission limits as standard. The single standing drive module ACQ580-04 and high power ACQ580-07 cabinet-built drives meet category C3 limits without options.

EMC standards

The EMC product standard (EN 61800-3) covers the specific EMC requirements stated for drives (tested with motor and motor cable) within the EU. EMC standards such as EN 55011 or EN 61000-6-3/4 are applicable to industrial and domestic equipment and systems including components inside the drive. Drive units complying with the requirements of EN 61800-3 are compliant with comparable categories in EN 55011 and EN 61000-6-3/4, but not necessarily vice versa. EN 55011 and EN 61000-6-3/4 do not specify cable length or require a motor to be connected as a load. The emission limits are comparable to EMC standards according to the table below.

Domestic environments versus public low voltage networks

1st environment includes domestic premises. It also includes establishments directly connected without an intermediate transformer to a low voltage power supply network that supplies buildings used for domestic purposes. 2nd environment includes all establishments directly connected to public low voltage power supply networks.

Built-in chokes to mitigate harmonics

ACQ580 drives are equipped with built-in chokes which provide sufficient level of harmonic mitigation for most operation environments. The ACS580-31 ultra-low harmonic drives are available for cases where extremely good low harmonic mitigation is required.

Comparison of EMC standards				
EMC according to EN 61800-3 product standard	EN 61800-3 product standard	EN 55011. product family standard for industrial, scientific and medical (ISM) equipment	EN 61000-6-4, generic emission standard for industrial environments	EN 61000-6-3, generic emission standard for residential, commercial and light-industrial environment
1 st environment. unrestricted distribution	Category C1	Group 1. Class B	Not applicable	Applicable
1 st environment. restricted distribution	Category C2	Group 1. Class A	Applicable	Not applicable
2 nd environment. unrestricted distribution	Category C3	Group 2. Class A	Not applicable	Not applicable
2 nd environment. restricted distribution	Category C4	Not applicable	Not applicable	Not applicable

du/dt filters

du/dt filtering suppresses inverter output voltage spikes and rapid voltage changes that stress motor insulation. Additionally, du/dt filtering reduces capacitive leakage currents and high frequency emission of the motor cable as well as high frequency losses and bearing currents in the motor. The need for du/dt filtering depends on the motor insulation. For information on the construction of the motor insulation, consult the manufacturer. More information on the du/dt filters can be found in the ACQ580 hardware manual.

du/dt filter selection table		
Motor type	Nominal mains voltage ($U_{_{\rm N}}$)	Motor insulation requirement
ABB M2 and M3 motors	<i>U</i> _N ≤ 500 V	Standard insulation system, including insulated N-end bearing
ABB form-wound HXR and AM motors	380 V < <i>U</i> _N ≤ 500 V	Standard insulation system, including insulated N-end bearing
ABB random-wound HXR and AM motors	380 V < <i>U</i> _N ≤ 500 V	ATEX certified thermistor protection module
Non-ABB random-wound and form-wound	<i>U</i> _N ≤ 420 V	lf the insulation system withstands \hat{U}_{LL} = 1600 V and Δt = 0.2 μs, du/dt filtering is not required. With du/dt filtering the insulation system must withstand \hat{U}_{LL} = 1300 V.

 $U_{\rm N}$ = Nominal mains voltage

 $\hat{U}_{\scriptscriptstyle LL}$ = Peak line-to-line voltage at motor terminals

Δt = Rise time, ie, interval during which line-to-line voltage at motor terminals changes from 10 to 90% of full voltage range

Cooling and fuses

Cooling

ACQ580 drives are fitted with variable-speed cooling fans. The speed-controlled fans cool the drive only when needed, reducing overall noise level and energy consumption.

Fuse connection

Standard fuses can be used with the ACQ580 drives. For input fuses, see the table below:

Wall-mounted drives, ACQ580-01

Choose the motor for your water application

Induction motors and the ACQ580 form a reliable combination

Induction motors are used throughout the industry in many water and wastewater applications and in a wide range of environments. ACQ580 drives fit perfectly together with this type of motor by providing comprehensive functionality yet simple operation. IE3 motors and our drives provide a perfect foundation for energy efficiency, while delivering capabilities such as exceeding nominal motor speed when maximum power is needed.

Permanent magnet motors and the ACQ580 for smooth operation

Permanent magnet technology is used for improved motor characteristics in terms of energy efficiency and compactness. This technology is particularly well-suited for low speed control applications, as they eliminate the need to use gear boxes. Even without speed or rotor position sensors, the ACQ580 drives control most types of permanent magnet motors.

IE4 synchronous reluctance motors and the ACQ580 for optimized energy efficiency

Our drive and motor pairings guarantee your energy efficiency levels. The key is in the rotor design. Combining the ACQ580's control technology with our synchronous reluctance motors (SynRM) will give you a motor and a drive package that guarantees energy efficiency, reduces motor temperatures and provides a significant reduction in motor noise.

Ultimate efficiency and reliability to minimize your system cost of ownership

Losses

Innovation inside

The idea is simple. Take a conventional, proven stator technology and a totally new, innovative rotor design. Then combine them with a dedicated water industry drive loaded with new, application-designed software. Most of the pumps are constantly running at partial loads due to conservative design. With the Synchronous reluctance motor (SynRM) the energy efficiency remains at excellent levels also at partial loads.

Magnet-free design

Synchronous reluctance technology combines the performance of the permanent magnet motor with the simplicity and service-friendliness of an induction motor. The new rotor has neither magnets nor windings and suffers virtually no power losses. And because of identical footprints, maintenance is as straightforward as with induction motors.

Superior reliability to minimize the cost of not running

IE4 synchronous reluctance motors have very low winding temperatures, which increases the reliability and lifetime of the winding. More importantly, the cool synchronous reluctance rotor means significantly lower bearing temperatures - an important factor because bearing failures cause about 70 percent of unplanned motor outages.

ABB automation products

AC500

ABB's powerful flagship PLC offering provides wide range of performance levels and scalability within a single simple concept where most competitors require multiple product ranges to deliver similar functionality.

AC500-S

A PLC based modular automation solution that makes it easier than before to mix and match standard and safety I/O modules to expertly meet your safety requirements in all functional safety applications. "Extreme conditions" version is also offered.

Programmability

Automation Builder integrates the engineering and maintenance for PLC, drives, motion. HMI and robotics. It complies with the IEC 61131-3 standard offering all five IEC programming languages for PLC and drive configuration. Automation Builder supports a number of languages and comes with new libraries. FTP functions, SMTP, SNTP, smart diagnostics and debugging capabilities.

AC motors

ABB's low voltage AC motors are designed to save energy, reduce operating costs and enable demanding motor applications to perform reliably and without unscheduled downtime. General performance motors combine convenience and easy handling seamlessly with ABB's engineering expertise. Process performance motors provide the most comprehensive.

AC500-eCo

Meets the cost-effective demands of the small PLC market while offering total inter-operability with the core AC500 range. Web server, FTP server and Modbus-TCP for all Ethernet versions. A Pulse Train Out-put module is available for multi-axis positioning.

AC500-XC

"Extreme conditions" modules with extended operating temperature, immunity to vibration and hazardous gases. for use at high altitudes, in humid conditions. etc. It replaces expensive cabinets with its built-in protection against dirt, water, gases and dust.

Our control panels offer a wide range of touchscreen graphical displays from 3.5" up to 15". They are provided with userfriendly configuration software that enables tailor made customized HMI solutions. Rich sets of graphical symbols and the relevant drivers for ABB automation products are provided. Control panels for visualization of AC500 web server applications are available.

All-compatible drives portfolio

The all-compatible drives share the same architecture; software platform, tools, user interfaces and options. Yet, there is an optimal drive from the smallest water pump to the biggest cement kiln, and everything in the between. When you have learned to use one drive it, is easy use the other drives in the portfolio.

Water library package

ABB's water library is compatible with the AC500 series PLC's. They provide advance pumping functions, data logging, remote access and reliable data communication. The libraries ensure saved engineering time and costs as well as ease of use with fast programming possibilities.

Softstarters

ABB's softstarters increase a motor's lifetime by protecting it from electrical stresses. With everything that you need in one unit, from bypass contactor to overload protection, a single Softstarter makes for a compact and complete starting solution.

Securing the flow of water and wastewater in the pump system

We want to be part of securing the operation of your water and wastewater utilities and distribution system. We want to help prevent any interruptions in your pump operation. We also want to ensure that the water is flowing in an effortless and energy efficient manner in accordance with required standards and regulations.

Complete offering of devices and services for the water industry

As a global partner, we can manage your water assets and bring you clear benefits from a total cost of ownership perspective. We do this by reducing costs throughout the whole life cycle of your pumping solution. Our portfolio includes drives, motors, PLCs and sensors. We also offer remote monitoring solutions to access information from a pump operating at a distance, saving time and reducing costs. Our devices have been designed to be compatible with each other, which ensures reliable communication and functionality.

Proactive maintenance for minimizing disruption to your pump and water distribution system Motor-driven applications can be found throughout the water and wastewater industry. They have a high degree of reliance placed upon them and often perform critical duties and have a high in-service value. A possible failure of a device in the water and wastewater distribution system can result in loss of production, and introduce safety and environmental consequences. To reduce the risk of failure, each element of the pump solution - whether a drive, motor, bearing, coupling or gearing - must be properly maintained at the right times in their life cycle. From the moment you make the first enquiry to the disposal and recycling of each component, the services offered by ABB span the entire life cycle of your pump. Throughout the value chain, training, technical support and customized contracts are also available.

Services to match your needs

Your service needs depend on your operation, life cycle of your equipment and business priorities. We have identified our customers' four most common needs and defined service options to satisfy them. What is your choice to keep your drives at peak performance?

Is uptime your priority?

Keep your drives running with precisely planned and executed maintenance.

Example services include:

- ABB Ability Life Cycle Assessment
- Installation and Commissioning
- Spare Parts
- Preventive Maintenance
- Reconditioning
- ABB Drive Care agreement
- Drive Exchange

Is rapid response a key consideration?

If your drives require immediate action, our global network is at your service.

Example services include:

- Technical Support
- On-site Repair
- ABB Ability Remote Assistance
- Response time agreements
- Training

Rapid response

Operational efficiency

Drives service Your choice, your future

The future of your drives depends on the service you choose.

Whatever you choose, it should be a well-informed decision. No guesswork. We have the expertise and experience to help you find and implement the right service for your drive equipment. You can start by asking yourself these two critical questions:

- Why should my drive be serviced?
- What would my optimal service options be?

From here, you have our guidance and full support along the course you take, throughout the entire lifetime of your drives.

Your choice, your business efficiency

ABB Drive Care agreement lets you focus on your core business. A selection of predefined service options matching your needs provides optimal, more reliable performance, extended drive lifetime and improved cost control. So you can reduce the risk of unplanned downtime and find it easier to budget for maintenance.

We can help you more by knowing where you are!

Register your drive at www.abb.com/drivereg for extended warranty options and other benefits.

Option code	Description
+P932	ACQ580 extension of warranty
	to 60 months from delivery

Need to extend your assets' lifetime?

Maximize your drive's lifetime with our services.

Example services include:

- ABB Ability Life Cycle Assessment
- Upgrades, Retrofits and Modernization
- Replacement, Disposal and Recycling

Life cycle management

Is performance most critical to your operation?

Get optimal performance out of your machinery and systems.

Example services include:

- ABB Ability Remote Services
- Engineering and Consulting
- Inspection and Diagnostics
- Upgrades, Retrofits and Modernization
- Workshop Repair
- Tailored services

Performance improvement

A lifetime of peak performance

You're in control of every life cycle phase of your drives. At the heart of drive services is a fourphase product life cycle management model. This model defines the services recommended and available throughout drives lifespan.

Now it's easy for you to see the exact service and maintenance available for your drives.

Keeping you informed

We notify you every step of the way using life cycle status statements and announcements.

Your benefit is clear information about your drives' status and precise services available. It helps you plan the preferred service actions ahead of time and make sure that continuous support is always available.

Step 1

Life Cycle Status Announcement

Provides early information about the upcoming life cycle phase change and how it affects the availability of services.

Step 2

Life Cycle Status Statement

Provides information about the drive's current life cycle status, availability of product and services, life cycle plan and recommended actions.
